

Rapid Deployment Relocatable Standpipe

A rapidly deployable robust standpipe which is perfect for civil, mining and industrial projects where the worksite continues to move throughout the duration.

This is a super strong and robust construction that has been designed and developed as always through our core mantra's of Increased Safety, Increased Productivity, Decreased Downtime and Savings on operational costs. Manufactured to handle the harshest of environments which our hard working Australians find themselves in. There are a number of hard wearing and tough finishes and materials to choose from. From Hot Dip galvanised, Duplex coated, stainless Steel and HDPE constructions Liquimech has a unit to suit any requirement. Easily moved with integrated fork pocket, and rated lifting eyes, placement is breeze. With Liquimech's proprietary Patent pending folding design these robust units can be assembled in less than five minutes. Minimise risk with no need for personnel to be working under suspended loads or use of EWP's to install these clever units. The Liquimech rapidly relocatable unit is modularised to enable the standard unit to be easily adapted to work in high wind zones as per AS/NZS1170.

Patent pending AU2020903414

Features

- Rapidly and safely deployable
- Weather & UV Resistant
- Integrated Fork Lift Pockets
- Transport Locking Features
- Rated Lifting Point
- Patented Smart Folding Mechanism
- Large range of Finishes available.
- In Gauge design for ease of transport.
- Adaptable for high Wind Zones as per AS/NZS 1170
